

IN THE SPECIFICATION

Please replace the paragraph in the specification at page 16, lines 1- 8, with the following amended paragraph:

In reception example 1 in FIG.5, the symbol currently being received ST1 (~~time t1 to t2~~) (time t2 to t3) is assumed to correspond to a period during which the signal intensity of cyclic fading is low. That is, during reception of the next pilot signal, symbol ST1 is excluded from the symbol to be despread. Then, symbols to be received are randomly selected from among symbols other than symbol ST1.
